

Weighing Surveillance Camera

Product Description

Leon's Engineering development team has incorporated surveillance camera technology feeding automatically the weighing system snapshots of the truck, when it is on the weighbridge. One picture (front side of the truck) or two pictures (front and rear side of the truck) are grabbed and stored to system memory during the weighing procedure .

Basic Features

- Truck positioning is checked on the weighbridge
- Truck driver is checked to be on the truck
- Driver verification
- Truck plate number verification
- Material loaded verification
- Real time of weighing sequence supervision through internet for security reasons
