

Transportable Weighbridge Ramps

Introduction

For all Leon Engineering weighbridge models, an appropriate transportable ramp has been designed, having the right size and height.

There are two different types of transportable ramps:

Steel Ramp Features

- Light weight, though heavy duty
- Easily lifted, even by a small forklift
- Easily relocatable
- Fixed directly on concrete surface through chemical bolts

Concrete Ramp Features

- Heavy duty: special reinforced concrete quality has been used. A steel frame protects the edges and the lower part of the ramp.
- Easily lifted by a 2t forklift
- Easily fixed directly on concrete surface through chemical bolts

Dimensions in m.

Ramp Type	Height		Width	
Steel	0,30	1	1,25	
	0,36	1	1,25	
	0,42	1	1,25	
Concrete	0,30	1	1,25	
	0,36	1	1,25	
	0,42	1	1,25
